

Whole-population AF; conditioned on segregation today. Boxes: IQR; whiskers: 10th–90th percentiles.

Lines: means. Bands: 10th–90th percentiles across regions, not confidence intervals.
Right-hand y-scales vary. Mass is not renormalized to 1–50 kya; focal coordinate is 500 kb.

Introgression, s=0.02 · selected-minus-neutral coalescence mass
Dashed: selection at 40–20 kya. Dotted: ±100 kb detection tolerance. n=100 selected, 50 neutral.

Excess mass per 1-kyr bin

Support is the union over positions within ±100 kb; threshold is calibrated over the entire 1-Mb region.
“Mistimed” means no near-site temporal overlap. Rows are identical across panels; every survivor is shown.
